

Dear FCC, i'm writing this in support of xm radio's instant traffic and weather services. the so called traffic and weather stations in this area take to long in report current road hazzards that pop up in my daily commute. Furthermore since the Washington DC area is so diverse the xm service gives me the info i need for my morning commute were as the other radio services usually only key in on the major clogged arteries. I feel that xm does a great service to it's listeners in supplying this at no additional cost. Since i frequently travel between Washington dc and Baltimore md i can find out the traffic situations for either area in less than 2 minutes where at with conventional radio this would take me aprox 15. Those 15 minutes could mean the difference between a 30 minute commute or a hour and a half traffic, gridlock hell. Please refrain from Nab's petition 04-160 from going thru, they are unsupported and unjust in trying to ban xm from providing this service to their listeners
